15 years of steel excellence

Since its commissioning in 1998, ArcelorMittal Saldanha Works has established itself as an exporter of quality hot rolled steel coil.

With 568 staff and various contractors, it is one of the major providers of employment in the Saldanha Bay area.

The ISO 9002 and ISO 14001-accredited plant is the only steel mill in the world to have successfully combined the Corex/Midrex process into a continuous chain – replacing the need for coke ovens and blast furnaces, and making the plant a world leader in emission control and environmental management.

Currently the plant produces 1.2 million tonnes of hot rolled coil per annum.

The plant is distinguished by merging leading edge technologies to produce high quality, ultra thin, hot rolled coil (UTHRC).
