

Saldanha Science Centre participates in World Robotics Olympiad

The ArcelorMittal Foundation's Saldanha Science Centre, headed by the robotics facilitator Siphosethu Legoabe, entered five of the nine primary schools the centre manages into the World Robotics Olympiad that was held at the end of October 2022.

The learners were asked to compete in numerous pre-determined challenges that showcased their understanding of the concepts in a practical way, who were then judged by their facilitator and other invited judges.

Congratulations to the learners who really went out of their way to prove themselves, achieving two gold awards, two silver awards and one bronze award. These learners are well on their way to developing the much-needed skills to survive in the 21st century.

The Saldanha Science Centre remains committed to developing the skills of its learners and promoting Science and Technology within the local communities.
