BASIC OXYGEN FURNACES RE-COMMISSIONED AFTER THE FIRE AT
VANDERBIJLPARK

Shareholders are referred to the announcements released on SENS on 11 February, 22 February and 4 March 2013, with reference to a fire that occurred at ArcelorMittal South Africa's Vanderbijlpark Works on 9 February 2013.

The fire caused severe damage to three Basic Oxygen Furnaces (BOFs) in the steel making facility. Repairs to the steel making facility have been completed and the three BOF's have been re-commissioned and are now fully operational.

An assessment into the root cause of the fire has been completed and results reveal that the operation was affected by an unforeseen malfunction of the sensor and computer software.

ArcelorMittal South Africa will disclose the overall cost implication of the fire accident once all assessments are finalised.
