

Science made fun

VREDENBURG – The Arcelor-Mittal Science Centre hosted National Science Week activities for grade 9 learners last week.

This year is the International Year of Sustainable Energy and the ArcelorMittal Science Centre Team urged learners to join them for some “edutainment”. Activities included talk shops, a biomass power generation workshop, how to build a working racing car with straws and go racing, rocket shows, maths puzzles, cool science demonstrations, exhibitions, a CPUT exhibition of a low cost solar water heater and fish farming projects.

It was time for learners to think outside the box with the maths puzzles that help to sharpen problem-solving skills. From right to left: Megan Prezebs, Hayley Bester, Chante Warnick and Any-Girth Papier.
